).Comment: The S-100 protein is composed of two related polypeptide chains, alpha and be rain proteins, S-100 is also found in a variety of other tissues.

).Comment: S-100 is an intracellular protein that weakly binds calcium. It binds zinc vere with different affinities exist for both ions on each monomer. Physiological concentry with different affinities exist for both ions on each monomer. Physiological concentry
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ţ
                                                                                                                                                                                                                                                                                                                                                                                                     3-100 protein beta chain - bovine

1.Alternate names: neurocalcin delta-binding protein S100-beta
1.Species: Bos primigenius taurus (catle)
1.Date: 31-May-1979 #sequence revision 14-Nov-1983 #text_change 24-Nov-1999
1.Accession: A91254; B91110; A90075; S54348; A03077

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          C.Comment: The S-100 protein is composed of two related polypeptide chains, alpha and by brain proteins, S-100 is also found in a variety of other tissues.
C.Comment: S-100 is an intracellular protein that weakly binds calcium. It binds zinc vies, with different affinities, exist for both ions on each monomer. Physiological concellicum-binding sites.
                                                                                                                                                                                                          C.Comment: This protein is expressed predominantly in brain tissue by astroglial cells. C.Comment: The homodimer contains disulfide bonds, but the bond pattern has not been de
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              C;Species: Bos primigenius taurus (cattle)

                                    FUNCTION: Expressed by macrophages in acutely inflammated tissues FUNCTION: Expressed by macrophages in acutely inflammated tissues and in chronic inflammations. Seem to be an inhibitor of protein kinases. Also expressed in epithelial cells constitutively or induced during dermatoses. May interact with components of the intermediate filaments in moncoytes and epithelial cells. MISCELLANEOUS: Has been shown to bind calcium.

SIMMILARITY: Belongs to the S-100 family.

SIMILARITY: Contains 2 EF-hand calcium-binding domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         EF-HAND 1 (LOW AFFINITY) (POTENTIAL).

"Purification and characterization of a new member of the S-100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Blochem. Blophys. Res. Comun. 18:1246-1253(1992).
-!- SUBUNIT: Interacts with S1002.
-!- MISCELLANEOUS: This protein binds two calcium ions.
-!- SIMILARITY: Belongs to the S-100 family.
-!- SIMILARITY: Contains 2 EF-hand calcium-binding domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              human and mouse cDNA sequences.";

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              "Molecular cloning of ictacalcin: a novel calcium-binding protein from the channel catfish, Ictalurus punctatus.";

Brain Res. Mol. Brain Res. 41:81-89(1996).
-!- FUNCTION: Plays an important role in catfish calcium homeostasis.
-!- TISSUE SPECIFICITY: Abundant in epithelial cells of olfactory rosette, barbel, skin and gill but not brain or muscle.
-!- SIMILARITY: Belongs to the S-100 family.
-!- SIMILARITY: Contains 2 EF-hand calcium-binding domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;

"Profilaggrin is 613-625(1993).

-!- FUNCTION. AGGREGATES KERATIN INTERMEDIATE FILAMENTS AND PROMOTES

DISULFID-BOND FORMATION AMONGST THE INTERMEDIATE FILAMENTS DURING

TERMINAL DIFFERENTIATION OF MAMMALIAN BFIDERMIS.

-!- FTM: FILAGGRIN IS INITIALLY SYNTHESIZED AS LARGE, INSOLUBLE,

HIGHLY PHOSPHORYLATED PRECURSOR CONTAINING MANY TANDEM COPIES OF

324 AA. THE PRECURSOR IS DEPOSTIED AS KERATOHYALIN GRANULES.

DURING TERMINAL DIFFERENTIATION IT IS DEPHOSPHORYLATED &

PROTEOLYTICALLY CLEAVED.

PROTEOLYTICALLY CLEAVED.

-!- POLYMORPHISM: A NUMBER OF PROFILAGGRIN ISOFORMS HAVE BEEN FOUND

WHICH DIFFER BOTH IN SEQUENCE AND IN THE NUMBER OF FILAGGRIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             M GO; GO:0005865; C:cytoakeleton; NAS.

This clone was sequenced as part of a high-throughput process to sequence clones from Drosophila Gene Collection 1 (Rubin et al., Science 2000). The sequence has been subjected to integrity checks for sequence accuracy, presence of a polyA tail and contiguity within 100 kb in the genome. Thus we believe the sequence to reflect accurachly this particular cDNA clone. However, there are artifacts associated with the generation of CDNA clones that may have not been detected in our initial analyses such as internal priming, priming from contaminating genomic DNA, retained introns due to erverse transcription of unspliced precursor RNAs, and reverse transcription of unspliced precursor RNAs, and reverse transcription about this sequence, including its location and relationship to other sequences, please visit our Web site (http://fruitfly.berkeley.edu) or send email to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GSRSSPERDSLVRLSQRRPDLVDAQYTILATDADPVEKMPLVEHCQFKYLFNFRGVAA

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones.

Overlapping clones are noted at the beginning and end of the Features listing.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage. "Merchait are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons STSS are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts. flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar. ANNOTATION OF FEATURES:

http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.ht QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found

Submitted (05-APR-2001) Sanger Centre, Hinxton, Cambridgeshire, CBIO 15A, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk clone requests: clonerequest@sanger.ac.uk clone Apr 6, 2001 this sequence version replaced gi:13273767.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations. Where differences are found these are annotated as variations. Where differences are found the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMEL; Sw:, SWISSPROT; Tr:, TREMEL; Wp:, WORMPEP; Information on the WORMPEP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          http://www.sanger.ac.uk/HGP/Chr13
RP11-431P10 is from the library RPCI-11.2 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 13, constructed by the Sanger Centre Chromosome 13 Mapping Group. Further information can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           sections only once, except for a 100 base overlap.

The true right end of clone RPI1-431R10 is at 86050 in this sequence. The true left end of clone RPI1-569012 is at 48980 in this sequence. The true right end of clone RPI1-600P1 is at 100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               4530. .6107
